Work Experience (~5 years)

GETIR

Istanbul, Turkey

FULL STACK DEVELOPER

01 / 2020 - ... (1 year +)

- Used technologies: javascript, reactjs, nodejs, mongodb, docker, aws

AKINON

Istanbul, Turkey

FULL STACK DEVELOPER

09 / 2018 - 01 / 2020 (1 year 4 months)

- Used technologies: javascript, react-native, expo, reactjs, nodejs, mongodb, aws, jenkins

CODEN

Istanbul, Turkey

FULL STACK DEVELOPER

07 / 2017 - 08 / 2018 (1 year 1 month)

- Used technologies: javascript, nodejs, mongodb, angularjs, aws, azure, .net

FEDERAL SMART

Istanbul, Turkey

FULL STACK DEVELOPER

02 / 2016 - 06 / 2017 (1 year 4 months)

- Used technologies: javascript, angularjs, android programming (java), csharp, rfid, beacon, ble

Projects

Getir Administration Panel (GAP)

@GETIR

FULL STACK DEVELOPER

- GAP is a web application used in GetirHQ.
- All operations for Getir's market delivery business are carried out via GAP. For example, product creation, order refund actions, real-time monitoring for all assets, dashboarding and data visualizations.
- I leaded to project for converting from angularjs to reactjs from scratch.
- Implemented both front-end, back-end and its microservices.
- We have added page / component based user authorization structure.
- ~javascript, nodejs, mongodb, nosql, mongoose, aws, s3, react, redux, webpack ~

Restaurant Administration Panel (RAP)

@GETIR

FULL STACK DEVELOPER

- RAP is a web application used by restaurants for getirfood.
- I maintained the codebase and added new features.
- ~javascript, nodejs, docker, aws, s3, react, redux, webpack ~

Franchise Administration Panel (FAP)

@GETIR

FRONT-END DEVELOPER

- FAP is a web application used by franchises for getir.
- I maintained the codebase and added new features.
- ~javascript, react, redux, webpack ~

Getir Administration Panel (GAP)

@GETIR

FULL STACK DEVELOPER

- GAP is a web application used in GetirHQ.
- All operations for Getir's market delivery business are carried out via GAP. For example, product creation, order refund actions, real-time monitoring for all assets, dashboarding and data visualizations.
- I led to project for converting from angularjs to reactjs from scratch.
- Implemented both front-end, back-end and its microservices.
- We have added page / component based user authorization structure.
- ~javascript, nodejs, mongodb, nosql, mongoose, aws, s3, react, redux, webpack ~

ApplicationBuilderPlatform (ABP)

@AKINON

FULL STACK DEVELOPER

- Web-based platform to automate building applications with specified configurations.
- It is used for building EcommerceMobileApp (mobile) and Instore (web) applications.
- I took part in both back-end and front-end development.
- ~javascript, nodejs, mongodb, nosql, mongoose, aws, s3, react, redux, webpack ~

DeploymentPipeline

@AKINON

FULL STACK DEVELOPER

- DeploymentPipeline is a jenkins pipeline to deploy specified app onto test or live platforms.
- It has some steps like cloning repo, downloading configurations, executing commands, deploying applications, etc.
- ~javascript, nodejs, webpack, jenkins ~

EcommerceMobileApp

@AKINON

MOBILE APPLICATION DEVELOPER

- EcommerceMobileApp is a single-codebase, configurable, ecommerce react-native (mobile) application.
- I took responsibility for developing the core features of the application from scratch.
- Additionally, I took vital role in integrating 3rd party tools (platforms, services) like - Google-Analytics, Sentry, Insider, Segmentify, Commencis, Visilabs - that provide analytics, push-notification-integrations, revenue-trackings, event-trackings, product-recommendations, deeplink, crash-reportings.
- It has some steps like cloning repo, downloading configurations, executing commands, deploying applications, etc.
- ~javascript, react-native, redux, expo, webpack, jest, mocha, chai, integration (analytics, push-notification, revenue-trackings, event-trackings, product-recommendations, deeplink, crash-reportings) ~

Instore

@AKINON

FRONT-END DEVELOPER

- Instore is a single-codebase, configurable, ecommerce react (web) application. It is being used in akinon customers' stores to sell products which are not available in store but available on website. I developed and maintained the core features of this application.
- ~javascript, react, redux, webpack, mocha, chai, jest ~

Domino Solutions

@CODEN

FULL STACK DEVELOPER

- Web and Mobile-based application that enables corporate users to trigger and terminate business workflows over mobile devices.
- The platform is connected to some ERP and CRM software packages like SAP, EBA etc.
- Developed web app with angularjs and maintained back-end part by using dot-net.
- Implemented a stripe payment integration that allows to subscribe selected solutions monthly.
- ~javascript, react, redux ~

MigrosBot

@CODEN

BACK-END DEVELOPER

- Developed Facebook Messenger Chatbot application for customers' use.
- Created the entire architecture includes network, security, database, API design, cache mechanism, performance, bot-ux-flow, etc.
- Implemented a dynamic image generator that composites product, price, text, font in a nice-looking way.
- Implemented a call center scenario with socket.io which allows customers to chat with the staffs via facebook messenger chatbot.
- Via this app, users can also see the nearest shops, authenticate with the phone number to join campaigns and can do some other cool stuffs.
- ~javascript, nodeJS, mongodb, redis, socket-io, facebook-messenger-api, azure ~

TowApp

@FEDERAL SMART

ANDROID AND WEB DEVELOPER

- Web and Android-based IOT project using BLE and Beacon technologies.
- The project is based on warning users via SMS messages from getting their cars towed.
- Developed an Android proximity tracker app which communicates with a the server.
- Developed a web app to monitorize, manage and define app related stuffs.
- ~android, java, javascript, angularJS, ble, beacon ~

SmartShelf

@FEDERAL SMART

FRONT-END DEVELOPER

- Web and Android-based IOT project using BLE and beacon technologies.
- The project is based on tracking movement of a product by beacon sensors to play the related video on the screen.
- Developed web app of SmartShelf (SS) to manage all operations.
- The project also includes role-based authentication, analytics, charts, dashboards, animations, google maps, interactive maps, inventory management, different language supports.
- ~javascript, angularJS, BLE, beacon ~

Akdeniz

@FEDERAL SMART

FULL STACK DEVELOPER

- Web and desktop-based warehouse management application using EPC GEN-2 RFID technology.
- Maintained codebase and developed new features.
- ~csharp, .net, rfid ~

HgsPark

@FEDERAL SMART

FRONT-END DEVELOPER

- Web-based gate passing application using EPC GEN-2 RFID technology for cars and peoples.
- ~javascript, angularJS, rfid ~
